

VILLAGE LIFE FOR OLDER BROTHERS AND SISTERS

There was no doubt that this abrupt transition, like the sudden weaning, was a shock for many boys between six-and-a-half and seven-and-a-half. From having been impudent, well-fed, self-confident and spoiled youngsters among the women many of them quickly became skinny, scruffy, subdued and with a hunted expression. The subdued and hunted looks passed off as they adjusted themselves to their new environment and there were boys, generally those exceptionally well grown and physically strong, who showed no apparent signs of shock. They all, however, showed the effects of irregular and inadequate feeding. The younger boys were chronically hungry and their hair and skin and bony knees and ribs were eloquent of calory, protein and vitamin shortages. 575

The other main purpose of dormitory life in Ngoni culture was to mix up all the boys in the village and let the common life together teach them how to get on with their age-mates and knuckle under to their superiors in age. Age and strength were the only criteria for authority. Older brothers might try to protect and intercede for younger brothers but it was not encouraged. All the young ones had to take their chance equally, without regard for their family name or their father's position. 575

The dormitory was primarily a sleeping-place, but through the group of boys who slept there the herding of cattle was organized and the off-duty amusements and occupations of the older boys were planned. The young ones had to 'fag' for the rest, fetching wood and water, keeping fires going, sweeping the hut, taking messages, huddling in a corner at night when the oldest boys brought girls in, and submitting to beatings both as a warning and as a punishment. They were usually beaten once or twice soon after their arrival and then threatened with much worse if they ever divulged what went on in the dormitory. It was not however a torture house, far from it, and the boys boasted of belonging to 'our dormitory' and were proud of having their own hidden life 575

CHILDREN OF THEIR FATHERS

575 there. It was a rough Spartan existence, where individual feelings and preferences had little scope, and where the younger ones were kept busy from dawn to dusk. Ngoni elders believed and indeed it was a key concept in their culture, that boys should be kept busy all the time and made to wash in cold water. Bathing in the cold streams of the Ngoni highlands was part of dormitory life. No Edwardian father talked more piously and convincingly about the merits of cold baths than Ngoni parents did.

575 The boys living in the dormitory continued to be fed from their mother's household. The older boys had their food brought by a child to the kraal gate as was done for their fathers. The younger ones sometimes fetched their own and took it to the kraal gate where they sat on the extreme edge of the men's group. More often they were given what was left over from their fathers' and older brothers' servings. This procedure accounted for the inadequate amounts eaten by the younger boys, though they drank some milk when milking the herds and out at the grazing grounds they made curds and caught birds and baked them in clay. Sometimes the desperation of hunger drove them to steal maize cobs or ground nuts from their mother's granary to roast in the ashes of their fire. This kind of stealing was condemned as very wrong by Ngoni standards, and sometimes older boys, in order to show their authority, forced the young ones to steal in this way on their behalf.

575 What effect did dormitory life produce on the boys? The Ngoni parents, the fathers that is, expected it to produce toughness, leadership, responsibility and respect for authority. On the whole it was successful. The Spartan life ensured toughness, the herding of cattle demanded responsibility and leadership, and the smooth running of dormitory society was based on respect for authority and obedience to it. From time to time the younger boys ganged up together to protect themselves from over-exploitation, and learned in these efforts at resistance the value of joint action. There was con-
